

## TRAINING FOR TEACHERS

**We are looking for schools that support innovation  
for climate solutions by young students**

The Young Innovators programme empowers youth to reduce climate change through innovation to understand, explore and mitigate against carbon-intensive lifestyles, particularly with young people aged between 12 - 18 years old.

This education programme aims to boost the necessary skills of students to prepare them to be active and insightful citizens in the future. These young people will soon become the leaders of our societies, businesses and nations - and this is a huge opportunity to raise awareness and enable our future generation to innovate for climate solutions.

There is **no cost** attached to this programme.

### **Help your students solve real climate challenges!**

As a participant, the appropriate teachers in your school will have access to real facts around climate related issues and will be trained how to use tools to help students analyse the ways to innovate for future solutions. This will then follow on with the potential to take part in a Young Climathon event in October, where students will be able to share and present their ideas.

#YoungInnovators

## We are offering schools, teachers and students ways to:

- Empower students to take climate action – respond to their desire to make a difference
- Foster experience-based and action-oriented learning
- Analyse and understand the context around real and current problems
- Use creative thinking to generate solutions
- Develop ideas and receive the support from local actors and problem holders

## The main features of the programme include:

- Group work activities
- Visual thinking tools
- Challenge-led activity
- Learning to deal with complex issues
- Participation in a Young Climathon event
- Connect to the local ecosystem and stakeholders

If taking part in this programme is an exciting prospect for your school, we would like to connect with you as soon as possible.
